

### Technical

What's your favourite language and why?

Do you have a preference for any particular framework?

What would you consider the strengths of \$language to be?

Do you think there are any scenarios where \$language would be an inappropriate choice?

What features would you like to see added to \$language?

Do you find any languages/frameworks intimidating?

What do you think makes good, maintainable code?

What do you understand by Test Driven Development (TDD)?

What do you understand by Continuous Integration (CI)?

What is your experience of version control?

What are your thoughts on Design Patterns?

What is your general strategy towards documenting your code?

If you were faced with a project that had performance issues, what steps would you take to investigate them?

If you were faced with a legacy project with maintainability problems, what things would you look to improve to get it on a stable footing?

How do you feel about code reviews?

What is your understanding of Domain Driven Design (DDD)?

Swap \$language for the language relevant for the role you are interviewing for.

### Personal

Tell us about yourself?

What projects are you working on in your spare time?

How do you keep up with tech trends?

What was the last project you worked on?

What are you looking for in a new position?

What was the last big mistake you made and how did you recover from it?

If you're put on a particularly busy project team with documentation on how to set up a development environment but you run into an undocumented issue, how would you look to progress?

### Agile

Do you have any experience of working in an Agile environment?

What is your understanding of the SCRUM methodology?

What are your thoughts on daily stand ups?

Would you be comfortable demoing a feature you worked on to a client?
