Type of binary

Interger	Number
String	Word with ".."
Float	decimal
Boolean	True/False

Basic Command

Print()	Show
int()	Change to integer
float()	Float
str()	String
input()	Ask for information
len()	Use for count a letter in string only
#	commenting single line
"""........."""	multiple lines commenting

Capitla

name.upper()	name.lower()

Order in string

"123456"[0]
the first letter is 0

Number Symnols

==
equal to
!=
not equal to
<
less than
<=
less than or equal to
>
greater than
>=
greater than or equal to
+
add
-
subtract
*
multiply
/
divide
**
exponent
%
modulo: the remainder

State

if /elif /else: only work one time in a series

and/or/not

and	both = true
or	only one is true= true
not	state the opposite
