

Asexual vs Sexual pro con

alot of offspring quickly, large colonies can form quick and compete with others, need no energy to mate	disease/neg.mut=d eaths, compete food and space, bad condition=wipeout colony
genetic diversity, ext. little energy find mate, more offspring can exist after disaster, int. more protection and care to offspring	int. more energy/risk to mate, fewer offspring, ext. gamates/embryos/o ffsprings unprotected

Stages of Sexual Reproduction

mating	egg and sperm together; same place, same time
fertiliz ation	gametes fuse to form zygote
develo pment	zygote develops into an embryo (unborn or unhatched offspring in the process of development)

Asexual reproduction

binary fission
budding
