

Asexual vs Sexual pro con

alot of offspring quickly, large colonies can form quick and compete with others, need no energy to mate	disease/neg.mut=deaths, compete food and space, bad condition=wipeout colony
genetic diversity, ext. little energy find mate, more offspring can exist after disaster, int. more protection and care to offspring	int. more energy/risk to mate, fewer offspring, ext. gamates/embryos/offsprings unprotected

Stages of Sexual Reproduction

mating	egg and sperm together; same place, same time
fertilization	gametes fuse to form zygote
development	zygote develops into an embryo (unborn or unhatched offspring in the process of development)

Asexual reproduction

binary fission
budding
