

Definition

Fallacy is the use of invalid or faulty reasoning

Some fallacies are committed intentionally to manipulate or persuade by deception, while others are committed unintentionally due to carelessness or ignorance

Aristotle was the first to systematize logical errors into a list, as being able to refute an opponent's thesis is one way of winning an argument

Richard Whately defines a fallacy broadly as, "any argument, or apparent argument, which professes to be decisive of the matter at hand, while in reality it is not"

https://en.wikipedia.org/wiki/List_of_fallacies

The first principle is that you must not fool yourself and you are the easiest person to fool, Richard P. Feynman

Types of Fallacies		
Formal 🖇	An error in logic in the argument's form.	
	Non Sequiturs	
	₹ Propositional fallacies	
	■ Quantification fallacies	
	Syllogistic fallacies	
Informal %	Reasons other than structural, require examination of the argument's content	
	Faulty generalizations	
	& Red herring fallacies	
Conditional or	Arguments disregard or confusion	

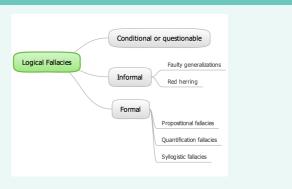

Other systems of classification

The most famous are those of Francis Bacon and J. S. Mill Bacon divided fallacies into 4 Idola (Idols, False Appearances), summarize the kinds of mistakes the human intellect is prone.

Offendicula of Roger Bacon

Opus maius, J. S. Mill book of his Logic, Jeremy Bentham's Book of Fallacies (1824). Whateley's Logic, A. de Morgan, Formal Logic (1847) Sidgwick, Fallacies (1883)

Formal fallacies 🖇

Appeal to	Takes something for granted because it would probably		
probab-	be the case Something can go wrong		
ility	(premise). Therefore, something will go		
	wrong (invalid conclusion)		
Argument	Aka fallacy fallacy, assumes that if an argument is		
from	fallacious, then the conclusion is false If ${\tt P}\text{,}$ then ${\tt Q}\text{.}$		
fallacy	P is a fallacious argument. Therefore, Q		
	is false

Formal fallacies \$\%\$ (cont)

Base rate fallacy

Making a probability judgment based on conditional probabilities, without taking into account the effect of prior probabilities Police officers have breathalyzers displaying false drunkenness in 5% of the cases the driver is sober. However, the breathalyzers never fail to detect a truly drunk person. One in a thousand drivers is driving drunk. The police officers stop a driver at random, and force the driver to take the test. The test is positive. You don't know anything else about him or her. How high is the probability he or she really is drunk? Many would answer as high as 0.95, but the correct probability is about 0.02. To find the correct answer, one should use Bayes's theorem

Formal fallacies \$\%\$ (cont)

Conjunction fallacy Assumption that an outcome simultaneously satisfying multiple conditions is more probable than an outcome satisfying a single one of them Linda is 31 years old, single, outspoken, and very bright. She majored in philosophy. As a student, she was deeply concerned with issues of discrimination and social justice, and also participated in anti-nuclear demonstrations. Which is more probable? Linda is a bank teller. Linda is a bank teller and active in the feminist movement. The majority of those asked chose second option. However the probability of two events occurring together is always less than or equal to the probability of either one occurring alone

Maskedman fallacv Substitution of identical designators in a true statement can lead to a false one Lois Lane believes that Superman can fly. Lois Lane does not believe that Clark Kent can fly. Therefore Superman and Clark Kent are not the same person

Propositional fallacies

A propositional fallacy is an error in logic that concerns compound propositions. For a compound proposition to be true, the truth values of its constituent parts must satisfy the relevant logical connectives and, or, not, only if, if and only if

Formal fallacies % (cont)		Informal Fallacies (cont)	
Affirming a disjunct	Concluding that one disjunct of a logical disjunction must be false because the other disjunct is true Max is a mammal or Max is a cat. Max is a mammal. Therefore, Max is not a cat	Argument from ignorance	argumentum ad ignorantiam It asserts that a proposition is true because it has not yet been proven false (or vice versa) There may be seventy kazillion other worlds, but not one is
Affirming The antecedent is claimed to be true because the the consequent is true; if A, then B; B, therefore A If consequent someone owns Fort Knox, then he is rich.			known to have the moral advancement of the Earth, so we're still central to the Universe
Gates owns Fort F	Bill Gates is rich. Therefore, Bill Gates owns Fort Knox The consequent is claimed to be false because the	Argument from incred- ulity	Appeal to common sense "I cannot imagine how this could be true; therefore, it must be false." Argument from ignorance
Denying the antecedent	antecedent is claimed to be raise because the antecedent is false; if A, then B; not A, therefore not B If you are a ski instructor, then you have a job. You are not a ski instructor, Therefore, you have no job	Argument from repetition	argumentum ad nauseam, argumentum ad infinitum signifies that it has been discussed extensively until nobody cares to discuss it anymore; sometimes confused with proof by assertion
Quantification fallacies A quantification fallacy is an error in logic where the quantifiers of the premises are in contradiction to the quantifier of the conclusion		Argument from silence	argumentum ex silentio conclusion is based on the absence of evidence, rather than the existence of evidence
Existential fallacy	An argument that has a universal premise and a particular conclusion Every unicorn definitely has a horn on its forehead	Argument to moderation	ad temperantiam false compromise, middle ground, fallacy of the mean. Assuming that the compromise between two positions is always correct
Informal Fallacies		Argumentum verbosium	See: by verbosity
Informal fallacies Arguments that are fallacious for reasons other than structural (formal) flaws and usually require examination of the argument's content.		Begging the question	petitio principii providing what is essentially the conclusion of the argument as a premise Opium induces sleep because it has a soporific quality A kind of circular reasoning
Appeal argumentum ad lapidem Dismissing a claim as absurd to the without demonstrating proof for its absurdity A: stone Infectious diseases are caused by microbes		Shifting the burden of proof	See: <i>onus probandi</i> I need not prove my claim, you must prove it is false

By Jorge Juan (jorgejuan007)

It's obviously ridiculous

B: What a ridiculous idea! A: How so? B:

Informal Fallacies (cont)

Circular reasoning

circulus in demonstrando when the reasoner begins with what he or she is trying to end up with; sometimes called assuming the conclusion Whatever is less dense than water will float, because such objects won't sink in water

Circular cause and consequence The consequence of the phenomenon is claimed to be its root cause. Correlation does not imply causation

Continuum fallacy

Improperly rejecting a claim for being imprecise Fred is clean-shaven now. If a person has no beard, one more day of growth will not cause them to have a beard. Therefore Fred can never grow a beard

Correlative-based fallacies Correlation proves causation post hoc ergo propter hoc a faulty assumption that because there is a correlation between two variables that one caused the other. Suppressed correlative where a correlative is redefined

so that one alternative is made impossible

Divine fallacy

Argument from incredulity. Because something is so incredible / amazing / ununderstandable, it must be the result of superior, divine, alien or paranormal agency

Informal Fallacies (cont)

Double counting

Counting events or occurrences more than once in probabilistic reasoning, which leads to the sum of the probabilities of all cases exceeding unity

Equivocation Misleading use of a term with more than one meaning

Ambiguous middle term a common ambiguity in

syllogisms in which the middle term is equivocated

Definitional retreat changing the meaning of a word to

deal with an objection raised against the original wording.
