

Environmental Factors

Factors that make up the Environment and Biomes

common factors: temperature, food, pollutants/invasive species, population density, sound, light, and, fauna, flora, parasites
Factors also include the stresses that are destroying a habitat

Environmental Changes

Changes found in an environment, includes good and bad change.

Humans are most likely to change an environment

Major changes include: climate change, habit alteration, water quality, population growth/loss, large bodies of water disappearing/flooding, invasive species

Land Degradation

destruction of the land, caused primarily by humans and invasive burrowing species
