

### Pandas

```
import pandas as pd
# extracts the head
pd.head()
# calculating some statistical data
pd.describe()
# finds column/row using regex, returns df
pd.filter(regex="", axis=0) #row
pd.filter(regex="", axis=0) #column
# series to list
pd.tolist()
```

### Pandas

```
import pandas as pd
# extracts the head
pd.head()
# calculating some statistical data
pd.describe()
# finds column/row using regex, returns df
pd.filter(regex="", axis=0) #row
pd.filter(regex="", axis=0) #column
# series to list
pd.tolist()
```
