

Select method

```
$query = $adapter->select();
```

from method

```
$query->from(  
    'table',  
    ['alias' =>'column'],  
    'schema'  
);
```

Group

```
$query->group('column');  
$query->group(['column1', 'column2']);
```

Expressions

```
$query->from('table', new \Zend_Db_Expr('count(*)')); //This will make the query parser insert the expression as is, without any modifications.
```

join

```
$query->join(array('alias' => 'table'),  
            'alias.product_id = other_alias.product_id',  
            array('alias_column'=>'column') );  
$query->joinRight();//Same parameters for all below  
$query-> joinLeft();  
$query-> joinFull();  
$query-> joinCross();  
$query->joinNatural(table, [columns]); //dont need condition parameter (2nd parameter)
```
