### Requirements Symfony3

PHP 5.6 via Homebrew	<a href="https://github.com/Homebrew/homebrew-php">https://github.com/Homebrew/homebrew-php</a>
FIX date.time zone in php.ini	<a href="http://stackoverflow.com/questions/17682725/exception-datetime-construct-it-is-not-safe-to-rely-on-the-systems-ti">http://stackoverflow.com/questions/17682725/exception-datetime-construct-it-is-not-safe-to-rely-on-the-systems-ti</a>
MYSQL Installation	<a href="http://dev.mysql.com/downloads/mysql/">http://dev.mysql.com/downloads/mysql/</a>
MYSQL Variable in PATH	<a href="http://stackoverflow.com/questions/8195418/cant-access-mysql-from-command-line-mac">http://stackoverflow.com/questions/8195418/cant-access-mysql-from-command-line-mac</a>
Set Password in MYSQL for root via terminal	<a href="http://stackoverflow.com/questions/6474775/setting-the-mysql-root-user-password-on-os-x">http://stackoverflow.com/questions/6474775/setting-the-mysql-root-user-password-on-os-x</a>

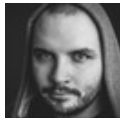

### PHP Storm Preferences

Create File Templates MAC	PHP Storm > Preferences > Search for "File Templates"
Intent Code	CMD+ALT+L
Generate Code	CMD+N

### Nice to know

Bundles composer son	Bundles können nicht rekursiv geladen werden. Sprich alle Bundles die benötigt werden müssen im ROOT bundle in die composer.json geschrieben werden.
