We learn lot of python in the past few months. First we begin with what is python and after that we learn how to plus divided and times. We learn how to convert decimal number to binary ,how python is important.Where is the google come from? and many thing with python Such as Divided Plus Times and Minus by using the code and practice us to make them right.For the function of random ,we learn this to making a game like hangman or many kind of game that .We have to random the word

If.Else.Elif		
IF		
ELSE		
ELIF		
Vocab		
variable	something that can change	
string	a list of character like number letter and sumbols	
integer number	whole number or counting number	
float	the number into decimal number	
number	number	
syntax	structure of language	
loop	while	
input	Gain information from user	
print	show information that we want on the screen	

a

	input()	ask for	information from user
	print()	show information that we want on the scree	
	int()	Chang	e number to be number integer
	float()	Chang	e number to be decimal
	str()	String symbo	a list of number ,letter , and I
	addition		
	Str + Str		combine together .Like "1" + "2" = 12
	Str +num	nber	crash
number+ number			sum, addition
subtraction			
str - number		ber	crash

str - number	crash
str - str	crash
number - number	subtract

Math		
==	equal to	
!=	not equal to
