Python peeravit

We learn lot of python in the past few months. First we begin with what is python and after that we learn how to plus divided and times. We learn how to convert decimal number to binary ,how python is import-ant.Where is the google come from? and many thing with python
Such as Divided Plus Times and Minus by using the code and practice us to make them right.For the function of random ,we learn this to making a game like hangman or many kind of game that .We have to random the word

If.Else.Elif

IF
ELSE
ELIF

Vocab

variable	something that can change
string	a list of character like number letter and sumbols
integer number	whole number or counting number
float	the number into decimal number
number	number
syntax	structure of language
loop	while
input	Gain information from user
print	show information that we want on the screen

function

input()	ask for information from user
print()	show information that we want on the scree
int()	Change number to be number integer
float()	Change number to be decimal
str()	String a list of number ,letter , and symbol

addition

Str + Str	combine together .Like "1" + "2" = 12
Str +number	crash
number+ number	sum, addition

subtraction

str - number	crash
str - str	crash
number - number	subtract

Math

==	equal to
!=	not equal to
<	less than
>	more than
<=	less than or equal to
>=	more than or equal to

Division

str / str	crash
str / number	crash
number / number	division

Multiplication

str*number	combine that string."6" *2 ='66'
str*str	crash
number-*number	multiply
str**str	crash

Random

random.ch-oice()	random word in the list. need to put 'import random' at the top first
