

Certificate Signing Request (CSR)

Generate a new private key and Certificate Signing Request

```
openssl req -out CSR.csr -new -newkey rsa:2048 -nodes -sha256 -keyout privat eKe y.key
```

Generate a self-signed certificate

```
openssl req -x509 -sha256 -nodes -days 365 -newkey rsa:2048 -keyout privat eKe y.key -out certif ica te.crt
```

Generate a certificate signing request (CSR) for an existing private key

```
openssl req -out CSR.csr -key privat eKe y.key -new
```

Generate a certificate signing request based on an existing certificate

```
openssl x509 -x509toreq -in certif ica te.crt -out CSR.csr -signkey privat eKe y.key
```

Remove a passphrase from a private key

```
openssl rsa -in privat eKe y.pem -out newPri vat eKe y.pem
```

Check Files

Check a Certificate Signing Request (CSR)

```
openssl req -text -noout -verify -in CSR.csr
```

Check a private key

```
openssl rsa -in privat eKe y.key -check
```

Check a certificate

```
openssl x509 -in certif ica te.crt -text -noout
```

Check a PKCS#12 file (.pfx or .p12)

```
openssl pkcs12 -info -in keySto re.p12
```

Debugging

Print certificate

```
openssl x509 -noout -text -in certif ica te.crt
```

Check an SSL connection. All the certificates (including Intermediates) should be displayed

```
openssl s_client -connect www.pa ypa l.c om:443
```

Remove Passphrase

Convert a PKCS#12 file (.pfx .p12) containing a private key and certificates to PEM

```
openssl pkcs12 -in keySto re.p12 -out keySto re.pem -nodes
```

Remove Passphrase from key-file

```
openssl rsa -in exampl e.key -out exampl e.n ocr ypt.key
```

Performance

Check the SSL performance

```
openssl speed sha1
```

```
openssl speed aes-256-cbc
```

```
openssl speed -evp aes-256-cbc
```

How to get a A+ at SSL-Labs

Check versions

```
# openssl version
OpenSSL 1.0.1e 11 Feb 2013
# apache2 -v
Server version: Apache /2.2.22 (Debian)
Server built: Aug 18 2015 09:50:52
```

Enable mods

```
a2enmod ssl
a2enmod headers
a2enmod setenvif
```

Configure virtual host

```
SSLEngine on
