OpenCV
Mediapipe

Creating 2 Python Files for each project

HandTrackingModule.py	FingerCounting.py
HandTrackingModule.py	AIVirtualPainting.py
HandTrackingModule.py	HandVirtualMouse.py
HandTrackingModule.py	HandVolumeControl.py

For each project, it is important to create a separate python file that comprises Class and the functions associated with that respective project.

Defining Hand Class and it's Methods

```
import cv2
import mediapipe as mp
import time
import math
import numpy as np
class handDe tec tor():
       def __init __( self,
mode=F alse, maxHan ds=2,
detect ion Con=0, trackC on=0):
                sel f.mode =
mode
                sel f.m axHands
= maxHands
                sel f.d ete -
cti onCon = detect ionCon
                sel f.t rackCon
= trackCon

                sel f.m pHands =
mp.sol uti ons.hands
```

Defining Hand Class and it's Methods (cont)

```
>         self.hands = self.mpHands.Hands-
(self.mode, self.maxHands, self.detecti-
onCon, self.trackCon)
        self.mpDraw = mp.solutions.drawing_-
utils
        self.tipIds = [4, 8, 12, 16, 20]

    def findHands(self, img, draw=True):
        imgRGB = cv2.cvtColor(img, cv2.CO-
LOR_BGR2RGB)
        self.results = self.hands.process(im-
gRGB)
        # print(results.multi_hand_landmarks)

        if self.results.multi_hand_landmarks:
            for handLms in self.results.multi_ha-
nd_landmarks:
                if draw:
                    self.mpDraw.draw_landmar-
ks(img, handLms, self.mpHands.HAND_-
CONNECTIONS)

        return img

    def findPosition(self, img, handNo=0,
draw=True):
        xList = []
        yList = []
        bbox = []
        self.lmList = []
        if self.results.multi_hand_landmarks:
            myHand = self.results.multi_hand_-
landmarks[handNo]
            for id, lm in enumerate(myHand.l-
andmark):
                # print(id, lm)
                h, w, c = img.shape
                cx, cy = int(lm.x w), int(lm.y h)
                xList.append(cx)
                yList.append(cy)
                # print(id, cx, cy)
                self.lmList.append([id, cx, cy])
                if draw:
```

Defining Hand Class and it's Methods (cont)

```
>                     cv2.circle(img, (cx, cy), 5,
(255, 0, 255), cv2.FILLED)

            xmin, xmax = min(xList), max(xList)
            ymin, ymax = min(yList), max(yList)
            bbox = xmin, ymin, xmax, ymax

            if draw:
                cv2.rectangle(img, (xmin - 20,
ymin - 20), (xmax + 20, ymax + 20), (0, 255,
0), 2)

        return self.lmList, bbox

    def fingersUp(self):
        fingers = []

        # Thumb
        if self.lmList[self.tipIds[0]][1] > self.l-
mList[self.tipIds[0] - 1][1]:
            fingers.append(1)
        else:
            fingers.append(0)

        # Fingers
        for id in range(1, 5):
            if self.lmList[self.tipIds[id]][2] < self.l-
mList[self.tipIds[id] - 2][2]:
                fingers.append(1)
            else:
                fingers.append(0)

        # totalFingers = fingers.count(1)

        return fingers

    def findDistance(self, p1, p2, img,
draw=True,r=15, t=3):
        x1, y1 = self.lmList[p1][1:]
        x2, y2 = self.lmList[p2][1:]
```

Defining Hand Class and it's Methods (cont)

```
>       cx, cy = (x1 + x2) // 2, (y1 + y2) // 2

      if draw:
         cv2.line(img, (x1, y1), (x2, y2), (255, 0, 255), t)
         cv2.circle(img, (x1, y1), r, (255, 0, 255), cv2.FILLED)
         cv2.circle(img, (x2, y2), r, (255, 0, 255), cv2.FILLED)
         cv2.circle(img, (cx, cy), r, (0, 0, 255), cv2.FILLED)
         length = math.hypot(x2 - x1, y2 - y1)

      return length, img, [x1, y1, x2, y2, cx, cy]
```

This Class represents the Hand and the methods represent the various actions associated with those hands and finger moments in order to capture the actions.

HandVirtualPaint File
