

 QuickWeb Use

Log Analysis

Where is the log downloader script?

In the repo: **Developer-Tools**

How do I use it to download a set of logs?

Usage: download <env tag>, leave blank for help.

Where are the logs stored?

<working directory>/mm-dd-env
& ./tomcat for web logs

Can I remove logs?

from <working directory>
download clean <env tag>

Suggest: Add the path in your git repo to the download.sh to your PATH.
