QuickWeb Use

Log Analysis

Where is the log downloader script?

In the repo: **Developer-Tools**

How do I use it to download a set of logs?

Usage: `download <env tag>`, leave blank for help.

Where are the logs stored?

`<wo rking direct ory >/m m-d d -env` & `./tomcat` for web logs

Can I remove logs?

from `<wo rking direct ory>` `downl oad clean <env tag>`

Suggest: Add the path in your git repo to the `downlo ad.sh` to your PATH.
