Echo Field Value

```php
<?php the_field('field_name'); ?>
```

Store the field in a Variable

```php
<?php $variable_name = get_field('field_name'); ?>
```

Print Array with Preformatted Text

```php
<pre>
    <?php print_r(get_field('field_name'));
?>
</pre>
```

If Statement

```php
<?php if(get_field('field_name')) { ?>
    If this is true, display this text.
<?php } ?>
```

Loop Through Array

```php
<?php
    $items = get_field('field_name');
    if( $items) { ?>
        <ul>
            <?php foreach($items as $item)
{ ?>
                <li> <pre><?php print_
r($item); ?></pre></li>
            <?php } ?>
        </ul>
<?php } ?>
```

Retrieve Value from Taxonomy Term

```php
<?php the_field('field_name',
'{term_name}_{term_id}'); ?>
Ex: <?php the_field('field_name',' post_t-
ag_4'); ?>
```

```php
<?php the_field('field_name','option'); ?>
```

ACF Pro Add Options Page Function

```php
if( function_exists('acf_add_options_page') ) {
acf_add_options_page();
}
```

Repeater Field

```php
<?php if( have_rows('repeater_field_name') ): ?>

        <ul>

        <?php while( have_rows ('repeate r_f-
iel d_n ame') ): the_row(); ?>

                <li >su b_f ield_1 = <?php
the_su b_f iel d(' sub_fi eld_1'); ?>, sub_fi-
eld_2 = <?php the_su b_f iel d(' sub_fi eld_2');
?>, etc</li>

                <?php

                $su b_f ield_3 = get_su b_f iel-
d(' sub_fi eld_3');

                // do something with $sub_f ield_3

                ?>

        <?php endwhile; ?>

        </ul>

<?php endif; ?>
```
