

### Echo Field Value

```
<?php the_field('field_name'); ?>
```

### Store the field in a Variable

```
<?php $variable_name = get_field('field_name'); ?>
```

### Print Array with Preformatted Text

```
<pre>
  <?php print_r(get_field('field_name')); ?>
</pre>
```

### If Statement

```
<?php if(get_field('field_name')) { ?>
    If this is true, display this text.
<?php } ?>
```

### Loop Through Array

```
<?php
  $items = get_field('field_name');
  if($items) { ?>
    <ul>
      <?php foreach($items as $item) { ?>
        <li> <pre><?php print_r($item); ?></pre>
      </li>
      <?php } ?>
    </ul>
  <?php } ?>
```

### Retrieve Value from Taxonomy Term

```
<?php the_field('field_name',
  '{term_name}_{term_id}'); ?>
Ex: <?php the_field('field_name','post_tag_4'); ?>
```

### Retrieve Value from User

```
<?php the_field('field_name', 'user_{user_id}'); ?>
Ex: <?php the_field('field_name','user_1'); ?>
```

### ACF Pro Pull Value from Options Page

```
<?php the_field('field_name','option'); ?>
```

### ACF Pro Add Options Page Function

```
if( function_exists('acf_add_options_page') ) {
  acf_add_options_page();
}
```

### Working with Images (Returning an ID)

```
<?php $image =
  wp_get_attachment_image_src(get_field('image_test'),
  'full'); ?>
" />
```

"Full" can be any size associated with Wordpress Theme

### Repeater Field

```
<?php if( have_rows('repeater_field_name') ): ?>

  <ul>

    <?php while( have_rows('repeater_field_name') ):
      the_row(); ?>

        <li>sub_field_1 = <?php
          the_sub_field('sub_field_1'); ?>, sub_field_2 = <?php
          the_sub_field('sub_field_2'); ?>, etc</li>

        <?php

          $sub_field_3 = get_sub_field('sub_field_3');

          // do something with $sub_field_3

        ?>

      <?php endwhile; ?>

    </ul>

  <?php endif; ?>
```

### Hide Custom Fields Panel Function in Admin Menu

```
add_filter('acf/settings/show_admin',
  '__return_false');
```
