

### Natural selection :

Only organisms with the traits most helpful/ useful in their environment survive to reproduce and pass on these helpful/ useful genes to offsprings

### Models of Natural Selection

- 1) Selective advantage/ Differential survival
- 2) Reproductive fitness (pass genes on to offsprings)

### Atomic Structure is the basis for Life's Chemistry

\* matter is composed of atoms. Each atom consists of a positively charged nucleus made up of protons and neutrons, surrounded by electrons bearing negative charges
