String methods	

String methods	
print (name.upper())	prints the variable in uppercase
print (name.lower())	prints the variable in lowercase
print(name.capitalize())	prints the variable with a capital
print (name.count("a"))	counts the number of a's in the variable
print (name.replace("n", "m"))	replaces the n's with m's
print (name.replace("h", ""))	replaces all the h's with nothing, removing the letter
A method is placed after the variable with a . between them and nearly always end with ().
