3.1 Health and Wellness Benefits		3.1 Health and Wellness Benefits (cont)		3.1 Health and Wellness Benefits (cont)	
Hypokinetic Diseases and Conditions1.People get cardiovascularCardio-disease for many reasons, eachvascularone called a risk factor. TheDiseasesmore risk factors you have, the more chance you have of getting a disease.Primary risk factor are the most important such as sedentary or inactive living, smoking, and high blood pressure.Secondary risk factor are less important that includes stressful living and excessive alcohol use.a.It is a cardiovascular disease coronary arterydisease exists when the arteries in your heart are clogged. Clogging of the arteries is called atherosclerosis. It occurs when substances including fats, such as cholesterol, build up on the insida walla of the arteries	People get cardiovascular disease for many reasons, each one called a risk factor. The	c. Stroke	It is the third leading cause of death and occurs when the oxygen in the blood supply to the brain is severely reduced or cut off.	e. Diabetes	When a person's body cannot regulate sugar levels. A person with diabetes will have excess- ively high blood sugar unless he or she gets medical assistance.
	Important terms	Blood pressure is force of blood against your artery walls. Systolic blood pressure is the pressure in your arteries immediately after the heart		Over time, diabetes can damage the blood vessels, heart, kidneys, and eyes. A very high level of sugar in the blood can cause coma and death.	
	Secondary risk factor are less important that includes stressful living and excessive alcohol		beats and higher readings. <b>Diastolic blood pressure</b> is the lower of the two numbers and is the pressure in the artery just before the next beat of the	Types of DiabetesType I - is not a hypokinetic condition. Thiscondition is often hereditary and accountsfor about 10% of all diabetics.Type II - most common kind of diabetes.	
	that is the number one cause of early death. Coronary artery disease exists when the arteries in your heart are clogged. Clogging of the arteries is called <b>atherosclerosis</b> . It occurs when substances including fats, such	heart. <b>High blood pressure</b> is sometimes referred to as <i>hypertension</i> . It is the condition in which blood pressure is consistently higher than normal. Normal blood pressure - 120/80 Prehypertension - 120-139/80-89		This is a hypokinetic condition because people who are physically active are less likely to have it. Overfatness is considered to be a major risk factor for Type II diabetes.	
				f. Obesity	A condition in which a person has a high percentage of body fat. The result of inactivity, although many other factors may contribute.
b. Heart attack	Occurs when the blood supply into or within the heart is severely reduced or cut off. As a result, an area of the heart muscle can die. During a heart attack, the heart may beat abnormally or even stop beating.	Prehypertension is a new category that hasbeen recently added. People in this rangehave higher than normal blood pressureand should start to take precautions toprevent higher blood pressure.d.More than 100 differentCancerdiseases characterized by the		g. #### **Physical Activity Wellness**

Physical activity plays an important role in the prevention of hypokinetic diseases and conditions. Therefore, physical activity is important to good health.

- 1. Improved sense of well-being Benefits: and functioning
  - 2. Looking your best
  - 3. Enjoying leisure activities
  - 4. Wellness and physical activity
  - 5. Work efficiency
  - 6. Opportunity for social interaction
  - 7. Ability to meet emergencies

#### Hyperkinetic Conditions

People experience hyperkinetic conditions which are health problems caused by doing too much physical activity.

1. Overuse injuries	Occur when you do so much physical activity that your bones, muscles, or other tissues are damaged. It is easy to see that overuse injuries—for example, stress fractures, shin splints, and blisters are a type of hyperkinetic condition.
2. Activity Neurosis	Neurosis is a condition that occurs when a person is overly concerned or fearful about something. People with activity neurosis are overly concerned about getting enough exercise and are upset if they miss a regular workout.
3. Body Image Disorder	This disorder occurs when a person tries to achieve an ideal body by doing excessive exercise. The ideal body is unrealistic and distorted.

#### Hyperkinetic Conditions (cont)

4. Eating	Several kinds of eating
Disorders	disorders result from an
	extreme desire to be
	abnormally thin. People with
	these conditions have
	dangerous eating habits and
	often resort to excessive
	activity to expend calories for
	fat loss.

#### 3.2 Healthy Back and Good Posture
