

Flora diversity determinants

1. Physical -> i) Terrestrial - Climate, Topography, and Soil ii) Aquatic - Depth, Water temperature, Flow rate, and Oxygen and Nutrient concentrations
2. Biological -> interaction between species
3. Historical

Biome vs Ecosystem

A biome is a large community of flora and fauna occupying major habitat	Ecosystem is a place where all biotic and abiotic things live together and interact
---	---

Consists of ecosystem sharing similar climate	consist of biotic and abiotic factors
---	---------------------------------------

large	small
-------	-------

Types of Biomes (9)

- Tropical rainforest
- Tropical seasonal forest / savanna
- Subtropical desert
- Woodland/Shrubland
- Temperate rainforest
- Temperate seasonal forest
- Temperate grassland/ desert
- Boreal forest
- Tundra
