

### Suggested Initial Position

### Start Knob - Controls Audio Offset

Fully CCW      Start of file  
Fully CW      End of file

Start CV input range: -5V to +5V

### Speed Knob - Controls Playback

CCW: Backwards      CW: Forward

LED Unlit: Frozen

**White:** /8      **Blue:** x1

**Orange:** /4      **Green:** x2

**Yellow:** /2      **Violet:** x4

Press Encoder      Reset to default (press again for reverse default)

Press and Hold      Enter instrument select mode

Speed CV input range: -5V to +5V

### Size Knob - Audio Sample Length

Size is relative to original sample length. If Size is larger than length determined by start knob, then entire length will loop. Further increase of Start results in length decrease regardless of Size knob.

Size CV input range: -5V to +5V

### Blend Knob - Controls Engine Mix

File Mode (Source LED Off)

CCW      Phase Vocoder Only

CW      Mixes in granular engine

Live Mode (Source LED On)

CCW      Mixes in phase vocoder

CW      Mixes in granular engine

Blend CV input range: -5V to +5V

### Pitch Knob (Independent of Speed)

LED Blue: Original Pitch

CCW - Decrease      CW - Increase

**Yellow:** -1 Octave      **Green:** +1 Octave

**Orange:** -2 Octaves      **Purple:** +2 Octaves

**White:** -3 Octaves

Press encoder      Reset to default

Press and hold, turn      Jump octaves

Pitch CV input range: -5V to +5V

### Overlap Knob - Grain Size / Spacing

Adjusts the size of the grains, as well as the amount of overlap between successive grains. As the grain size becomes larger than the space between grains (Density), the grains begin to overlap. Grain size ranges from 1% of the grain rate, to 600% of the grain rate.

Overlap CV input range: -5V to +5V

### Density Knob - Amount of Grains

CCW      Single grain every few seconds

CW      Grains produced at audio rate

Density CV input range: -5V to +5V

### Window Knob - Controls Envelope

Adjusts the amplitude envelope applied to each grain.

CCW      Softer

CW      Harder

Window CV input range: -5V to +5V

### Record Button

File Mode      Records portion of current sample

Live Mode      Records portion of input audio

Send gate to **Record** to start, gate again to stop.

To overdub, punch in anytime.

To clear buffer, hold **File** and press **Reset**.

To save buffer, hold **File** and press **Freeze**.

Record gate input threshold: 0.4

### File Button

Press **File** or send gate to cycle through files.

File gate input threshold: 0.4V

### Source Button

Switches between File Mode (LED off) and Live Mode (LED on). **Tap quickly** to avoid the secondary function.

Source gate input threshold: 0.4V

### Reset Button

Resets playback to start. During playback, LED flashes at the loop point.

Reset gate input threshold: 0.4V

### Freeze Button

Toggles freeze mode. Pauses playback position while retaining the spectral characteristics of the audio.

Freeze gate input threshold: 0.4V

### Boot Animation LEDs

**White:** Nebulae is booting up.

**Blue:** Nebulae is loading firmware files.

**Aqua:** Nebulae is loading USB files

**Green:** Nebulae is updating the firmware.

**Red:** Nebulae update has failed.
