Economic systems Cheat Sheet by nelaorav via cheatography.com/167833/cs/35268/

The resource allocation problem

Limited resources lead to scarecity which leads that every economy has to choose what Gs&Ss to produce with their limited resources. Some economies are better off while others do not posess so many resources as they would need.

Resource allocation - is choosing what to produce and how much land, labour and capital we will need to produce certain Gs&Ss

The basic e	economic questions
What to produce?	What Gs&Ss will be produced? In scarecity not all of them can be taken care of.
	Which needs and wants will be satisfied?
How to produce?	Choosing which method of production to use.
For whom to produce?	Whose wants and need will be satisfies? This depends on peoples opinions or it involves a value judgement.

Economic systems

How a national aconomy answers the basic economic questions is called an economic system.

Market economy - questions		
What to produce?	Only what is desired by the consumers	
How to produce?	The cheapest method available.	
For whom to produce?	The one's with the most money.

Market economy

Firms and households in the private sector determine the allocation of resources.

There is no role for government.

All resources in the market economy are owned by people and firms - all of them make as much profit as possible.

If a product or service is selling well firms increase the price they charge for higher profit as they know that people will still buy it.

Price mechanism

High prices are indicate the desired products by people.

Low prices indicate the firms should change the allocation of their resources.

Advantages	of the	market system	

The free market	Private firms
responds quickly to	adapt quicker to
people's wants	make more profit.
Wide variety of Gs&Ss	They want to
	meet consumer's
	wants.

Encouraging new and better methods and machines to produce Gs&Ss

The market systemThere is no needrelies on producers toto employ peopledecide the basicto makequestionsdecisions.

Disadvantages of the ma	arket system
Factors of production	People will
will be employ only if	become unempl-
they are needed	oyed.
Free market can fail	Public goods -
to provide some	street lighting or
Gs&Ss	flood barriers, etc.

Disadvantages of the market system (cont)

The free market	No regulations
encourages consumption	by govern-
of harmful Gs	ment.
The social effect of	No pollution
production may be	regulations by
ignored	government.
The free market allocates more Gs&Ss to consumers who have more money than others	Whealthier people can have better financial freedom.

These are the reasons why mixed economy is needed.

The mixed economy - questions

What to produce?	Based on regulations by the government.
How to produce?	Coping with regulations but still the cheapest way.
For whom to produce?	For those who want to buy it.

The mixed economy

Ownership and decision making ovefr the scarce resources are split between private and public sector.

Mixed economy combines market system with and interferance of government.

Still the aim is to make as much profit as possible.

Government also owns some scarce resource which they think their country needs and wants.

The benefits of n	nixed economy
The government can provide public Gs	Such as defence, street lightning or merit goods like healthcare or education.
	They get money for this by taxing people.
Government also owns some scarce resources	In case of need government can provide.
Reducing unemployment	Creating job spots in public companies.
Decrease the consumption of harmful Gs	They make them illegal.
Prevent pollutions	Places fines and restri- ctions on pollution done by firms.

Planned/Central economy - question	
What to produce?	government decides
How to produce?	government decides
For whom to produce?	for everyone

Planned/Central economy

An extreme opposite of a market economic system.

Almost all decisions are taken by organizations owned or accountable to government.

Individual consumers, firms and households have little control over tha allocation of resources.

The government provides information to firms what exactly they should produce and where people should work.

Firms have no motivation to do better and the quality of goods was poor or there was a shortage.

Developed and less developed economies

Developed economies	Countries with a high level of economic development.
	High average income, good quality housing, legal and education systemas, modern infastructure and wide range of industries.
Less-d- eveloped economies	Developing countries with a low level of economic develo- pment and well-being.
Overpo- pulation	An economic condition when there are too many people and too few resources.

Reasons for the underdevelopment of an	
economy	
High	Available Gs&Ss have to be
population	shared among more people.
growth	
Dependance	Developed countries by
on the	resources at low prices and
production	proceed to make Gs&Ss
and sale of	that they sell to less
agricultural	developed countries at high
products	prices.
Poor infras-	Poor transport and
tructure	communication networks.

Reasons for the underdevelopment of an economy (cont)

Lack of	LDC's have to spend their tight
capital	budget on foor for their
	enormous population there is
	no more moeny for them to
	spend elsewhere.
Low	Low levels of skills and qualif-
quality of	ication.
education	

Possible s	solutions or cures for underdeve-
Self- help	Some countries believe, that LCD's should not rely on help provided by other states.
Foreign aid	Food aid - necessary but if free food is given to LCD's their local products will not be sold - urbani- zations to find work in the cities
	Financial aid - giving money to developing countries on condition that they spend it on a particular project e. g. an airport. Usually providing countries depend on buying the material needed for this fromt hem at high prices. LCD's have no say to decide how to spend this financial aid.

Possible solutions or cures for underdevelopment (cont)

	Technological aid - developed countries sometimes provide LCD's with machinery and technology. The problem is that there are very few people who can work with it.
Borrowing	LCD's may be unable to repay it.
Trade	Producing and selling Gs&Ss to developed countries would help LCD's out but developed countries are not willing to buy them because they fear unemployment. Once LCD's become richer, they may buy Gs&Ss also from developed countries.
Population control	More people in poor countries means less resources per person. Better education on family planning would help to reduce population growth and to improve standards of living.
