Basic math operators

**	Exponent
%	Modulus
//	Integer division
*	Multiplication
-	Subtraction
+	Addition

Also, use *brackets* to override the usual precedence

Variable name rules

1. *Only one word allowed*

2. *Only numbers, letters and underscores allowed*

3. *Can't start with a number*

Examples of literals

Integer literals	1, 2, 0, -1, -3234
Floating point literals	2.15, -1.25, 0.0
String literals	"string", 'spam', ''

Comments

#	Marks the comment until EOL

String Concatenation and Replication

+	Concatenates 2 strings
string * *n*	Replicates the string *n* times

Note that replication needs *integer* as the right-hand value
