

isInfinite <code>num.isInfinite</code>	isNan <code>num.isNaN</code> True if the Number
sign <code>num.sign</code> Returns minus one, zero or plus one depending on the sign and numerical value of the number.	isEven <code>num.isEven</code> Returns number.
parse() <pre>void main() { print(num.parse('12')); print(num.parse('10.91')); }</pre> <p>The <code>parse()</code> static function allows parsing a string containing numeric literal into a number.</p>	hashCode <pre>void main() { int n = 5000; print(n.hashCode); }</pre> <p>syntax : <code>num.hashCode</code></p>
Useful functions	isFinite <code>num.isFinite</code>
<code>Number.abs()</code> <code>Number.ceil()</code>	isNegative <code>num.isNegative</code> This property the number
<code>Number.compareTo(x)</code> 0 if the values are equal. 1 if the current number object is greater than the specified numeric value.-1 if the current number object is lesser than the specified numeric value.	isOdd <code>num.isOdd</code> Returns the number.
<code>Number.floor()</code> <code>Number.remainder(x)</code>	
<code>Number.round()</code> <code>Number.toDouble()</code>	
<code>Number.toInt()</code> <code>Number.toString()</code>	
<code>Number.truncate()</code> Returns an int without decimal points.
