Main

```
public class MyAppEntryPoint {
    public static void main(String[] args)
{
        // args[0] is the first command-line
argument
    }
}
```

Construction

```
public class MySubClass
extends TheSuperClass
{
    // default constructor
    public MySubClass() {
        super(); // calls TheSuperClass'
constructor. Must be called first.
        // the above line can be omitted;
the call to TheSuperClass' default
constructor is performed implicitly.
    }
    // additional constructor
    public MySubClass(int i) {
        this(); // calls above MySybClass'
constructor. Must be called first.
    }
}
```
