

### configs

|                |  |
|----------------|--|
| tabWidth       | <b>White spaces</b> number <b>instead of each indent</b> (type: number)                              |
| useTabs        | Determine indentation unit, <b>tab or white space</b> (type: boolean)                                |
| semi           | <b>Add semi colon</b> at the end of each statement (type: boolean)                                   |
| single-Quote   | Use <b>single quote or double quote</b> (type: boolean)  |
| quoteProps     | <b>Add quotation in object</b> (type: string, values: as-needed/consistent/preserve)                 |
| trailingComma  | Add coma at the end of each statement, <b>if it is possible</b> (type: string, values: none/es5/all) |
| bracketSpacing | Add a white space between brackets and key-value in object (type: boolean)                           |
| arrowParens    | Add parentheses around the arrow functions (type: string, values: avoid/always)                      |
| requirePragma  | Prretier the specified files (type: boolean)   |
| endOfLine      | Determine EOF Special character (type: string, values: lf, crlf, cr, auto)                           |

### Defenition

What is it? Prettier is an opinionated code formatter. It enforces a consistent style by parsing your code and re-printing it with its own rules that take the maximum line length into account, wrapping code when necessary.

### How to use?

- Step one `npm i -g prettier`
- step two `ctrl + p, then ext install esbenp.prettier-vscode`
- Step three create `.prettierrc` file and write your configs
- Step four `Ctrl + p, then type Format Document`
- Final step Enable `formatOnSave`
