Rules for UNION in queries

For the Queries with union, use separate alias names for tables in the union. In second union all the alias should end with _01 (ex: rd_01) and third union should end with _02 (ex: rd_01) and so on

Before using an alias always do a search for that alias in the query for the existence and for getting the sequence continuation.

Rules for Inner Queries

For the inner queries, use the table alias name ending with 01 (ex: rd01)

General Tips

Report ID should be added in the Report Design

Report ID, Description , Last edit who should be there in the begining of the query block
