Cheatography

LDAP Filters Cheat Sheet by pamymaf via cheatography.com/154231/cs/33156/

LDAP definitions

entry	a collection of information about an entity
attribute	holds the data for an entry
object- Class	schema elements that specify collections of attribute types that may be related to a particular type of object, process, or other entity
dn	uniquely identifies that entry and its position in the directory information tree (DIT) hierarchy
rdn	the relative portion of a distinguished name (DN)
oid	a string that is used to uniquely identify various elements in the LDAP protocol

These are taken from the manual at https://ldap.com/basic-ldap-co-ncepts/

LDAP attribute types		
cn	common name	(attri-
name	name, same as cn	but-
dn	distinguished name	e=val*)
dc	domain component	(attri-
manager	manager	but- e=va*e
company	company	(attri-
department	department	bute=*)
0	organization	(attri-
ou	organizational unit	but-
uid	user id	e>=10)
description	description	(attri-
displayName	display name	but-
givenName	first name	e<=10)
sn	surname	(attri- bute~≕
title	job title	value)
location	location	(& ()
1	location	())
streetAddress	first line of address	(()
postalCode	zip code	())
		(! ())

LDAP attribute types (cont)

С	country
st	state
homephone	home phone number
mobile	mobile phone number
telephoneNumber	office phone number

There are many more available attribute types, consult your LDAP software's manual

Filter Stru	cture
()	each component of the search filter is enclosed in parent- hesis
(attri- bute=v- alue)	the specified attribute must match the specified value
(attri- but- e=val*)	* is a wildcard and will match anything
(attri- but- e=va*e)	wildcards can be anywhere in the string
(attri- bute=*)	this verifies the attribute exists at all
(attri- but- e>=10)	the specified attribute must be larger than 10
(attri- but- e<=10)	the specified attribute must be less than 10
(attri- bute~=- value)	the specified attribute must be like the value, this has no formal standard and each server may implement it differently
(& () ())	must match all entries
(() ())	must match at least one entry
(! ())	negates the result, true becomes false and false becomes true

Cheatography

LDAP Filters Cheat Sheet by pamymaf via cheatography.com/154231/cs/33156/

Example filters				
(& (ou=research) (! (c=us)))	entries where the organizational unit is research and the country is not the united states			
((telephoneNumbe-	entries where the telephone number			
r=555*) (mobileNumbe-	starts with 555 or the mobile number			
r=555*))	starts with 555			
(& ((location=riven)	entries where either the location is riven			
(postalcode=55893))	or the post code is 55893 and the job			
(title=manager))	title is manager
