

What is Cybersecurity?

Cybersecurity is a broad concept that refers to the protection of computer systems, networks, data and information against attacks, unauthorized access, destruction, theft, intrusion and other threats related to the digital space. Cyber security also includes protecting individual privacy and the rights of others online. To deal with these challenges, various solutions are used, including the use of antivirus software, firewall, data encryption, updating software and operating systems, educating users about safe productivity, and using intrusion detection and risk management technologies.
