mysql -u User -p Password DBName -h Host < Backupname.sql	<i>Import Backup from Current Directory to Database</i>

Shared SSH Window

User1: screen -l	<i>to start screen</i>
User2: screen -ls	<i>to check wich screens we have</i>
User2: screen -x	<i>to connect</i>

With this technique you can work together without screenshare via Putty, etc. and both people can actively do something

VI / VIM Editor

vim Filename	<i>create/edit File</i>
vi Filename	<i>create/edit File</i>

In Editor Command Mode

:w	<i>To Save the File</i>
:q	<i>To Close the Editor</i>
:wq or :x	<i>To Save and Close the Editor</i>
? Word	<i>To Search in the File</i>
Press i	<i>To switch to Insert Mode</i>

In Editor Insert Mode

Press **ESC** *To exit the Insert Mode and go to Command Mode*

Important Don't use Stuff like **CTRL + S** this will crash Putty

Expert User Stuff

grep -rnw -e "Searchword" *	<i>Search in Current Directory</i>
scp -C ssh-username@ssh-host:/path/to/file .	<i>Download File over SSH from an Server</i>
wget url	<i>Download File over http/https</i>
alias new-commandname="C-ommand"	<i>Create an Alias for the Current Session</i>
clear	<i>Clears the Terminal</i>
history	<i>Shows the History of Commands</i>
ctrl + r	<i>to search in the History</i>

Important If you want an Alias working every time you logging in you need to add it in the **.bashrc** file

Varnish Related Stuff
