

Import vuex modules from another file

```
New store-file.js:  
const state = {}  
const mutations = {}  
const actions = {}  
const getters = {  
  getName: (state) => {  
    return state.array  
  }  
}  
export default {  
  namespaced: true  
  state,  
  mutations,  
  actions,  
  getters  
}  
  
index.js (main store file)  
import store from './store-file'  
const Store = new Vuex.Store({  
  modules: {  
    store  
  }  
})  
  
component.vue:  
<script>  
  import { mapGetters } from  
  'vuex'  
  export default {  
    computed: {  
      ...mapGetters('storeName',  
      ['getName'])  
    }  
  }</script>
```

Import vuex modules from another file (cont)

```
}
```

Getter to retrieve all array

```
const getters = {  
  getName: (state) => {  
    return state.array  
  }  
}
```

Getter returning only certain elements

```
const getters = {  
  tasksTodo: state => {  
    let tasks = {}  
    Object.keys(state.tasks).fo-  
    rEach(function (key) {  
      let task = state.tas-  
      ks[key]  
      console.log('task: ',  
      task)  
      if (!task.completed) {  
        tasks[key] = task  
      }  
    })  
    return tasks;  
  }  
};
```

Deleting using vuex

```
component.vue where the method  
is triggered  
<script>  
  import { mapActions } from  
  'vuex'  
  
  methods: {  
    ...mapActions('storeName',  
    ['actionName'])  
  }</script>
```

Deleting using vuex (cont)

```
promptToDelete() {  
  this.$q.dialog({  
    title:  
    'Confirm',  
    message: 'Are  
    you sure?',  
    persistent: true  
  }).onOk(() => {  
    this.dele-  
    teFood(this.food.id)  
  })  
}  
  
quasar.conf.js
```

```
plugins: [
```

```
  'Dialog'  
]
```

```
store.js
```

```
import Vue from 'vue'  
const actions = {  
  deleteFood({ commit }, id) {  
    commit('deleteFood', id)  
  }  
}  
  
const mutations = {  
  deleteFood(state, id) {  
    let index = state.foo-  
    ds.findIndex( (food) => food.id  
    == id)  
    Vue.delete(state.foods,  
    index)  
  }  
}
```

Page 1 of 2.

Basic delete/add/edit operations

```
deleteFood: (state, id) => {
  let index = state.foods.findIndex(food => food.id == id);
  Vue.delete(state.foods, index);
},
addFood: (state, food) => {
  state.foods.push(food)
},
editFood: (state, food) => {
  let index = state.foods.findIndex(elem => elem.id == food.id);
  console.log(food, index)
  Vue.set(state.foods, index, food)
}
```

Validate requirements on submit

```
<q-input
  :rules="[
    val => val.length < 21 || `-
Please use maximum of 20 charac-
ters`
  ]
  ref="name"
  />
<q-btn
  @click="submitForm"
  label="Save"
  color="primary"
  v-close-popup />
methods: {
  submitForm() {
    this.$refs.name.valid-
ate()
  }
}
```

Conditional displaying of tag

```
v-
if="Object.keys(tasksTodo).length
```

Computed with setter and getter

```
computed: {
  ...mapState("tasks", ["searc-
h"]),
  searchField: {
    get() {
    },
    set(value) {
    }
  }
}
```

Quasar input validation

```
<q-input
  :rules="[
    val => val.length < 21 || `-
Please use maximum of 20 charac-
ters`
  ]
  filled
  v-model="foodToSubmit.name"
  label="Name (e.g. Burger)"
  class="col" />
```

Populating fields with data

```
mounted() {
  if (this.type == "edit") {
    console.log(this.food);
  }
}
```
