

### Overview

**Definition:** Forensic psychology is the intersection of psychology and the legal system. It involves applying psychological principles and methods to legal issues, including criminal investigations, court proceedings, and the treatment of offenders.

**Scope:** Encompasses various roles including criminal profiling, competency evaluations, expert testimony, and offender rehabilitation.

### Historical Background

**Early Foundations:** The field of forensic psychology has roots in both legal and psychological disciplines. Early contributions include the work of figures like Hugo Münsterberg and William Stern, who explored the application of psychological principles to legal contexts.

**Development as a Profession:** The establishment of forensic psychology as a distinct field gained momentum in the late 20th century, with increasing recognition of the need for psychological expertise in the legal system.

### Key Areas of Forensic Psychology

**Criminal Profiling:** **Definition:** The process of creating a psychological profile of an offender based on crime scene evidence, patterns, and behavior.

**Behavioral Analysis:** Studying the behavior of offenders to predict characteristics and motivations.

**Geographic Profiling:** Analyzing the locations of crimes to determine the offender's home base or areas of activity.

**Competency Evaluations:** **Definition:** Assessing an individual's mental state to determine their ability to stand trial or make legal decisions.

**Competency to Stand Trial:** Evaluating whether a defendant has the mental capacity to understand the charges, participate in their defense, and assist their attorney.

**Competency to Plead Guilty:** Assessing whether a defendant can make an informed decision about pleading guilty.

### Key Areas of Forensic Psychology (cont)

**Insanity Defense Evaluations:** **Definition:** Assessing whether an individual was legally insane at the time of committing a crime, and thus unable to be held criminally responsible.

**M'Naghten Rule:** Focuses on whether the defendant knew right from wrong at the time of the offense.

**Durham Rule:** Considers whether the defendant's actions were the result of a mental illness.

**Model Penal Code Test:** Evaluates whether the defendant lacked substantial capacity to appreciate the criminality of their conduct or conform their conduct to the law.

**Risk Assessment:** **Definition:** Evaluating the likelihood that an individual will engage in future criminal behavior.

**Static Risk Factors:** Unchangeable factors such as past criminal behavior, age, and gender.
