Schematics

address-form

Component with a form group that uses Material Design form controls to prompt for a shipping address

navigation

Creates a component with a responsive Material Design sidenav and a toolbar for showing the app name

dashboard

Component with multiple Material Design cards and menus which are aligned in a grid layout

table

Generates a component with a Material Design data table that supports sorting and pagination

tree

Component that interactively visualizes a nested folder structure by using the `<mat-tree>` component

drag-drop*

Component that uses the `@angular/cdk/drag-drop` directives for creating an interactive to-do list

```
ng g @angular/material:<schematics> <name>
```

```
*ng g @angular/cdk:drag-drop <name>
```

Autocomplete

Simple

```
<mat-form-field>
  <input type="text"
    matInput
    [formControl]="myControl"
    [matAutocomplete]="auto">
</mat-form-field>

<mat-autocomplete
  #auto="matAutocomplete">
  <mat-option
    *ngFor="let option of options"
    [value]="option">
    {{option}}
  </mat-option>
</mat-autocomplete>

export class AutocompleteSimpleExample {
  myControl = new FormControl();
  options: string[] = ['One', 'Two', 'Three'];
}
```

Filter

```
<mat-option
  *ngFor="let option of options | async"
  [value]="option">

options: Observable<string[]>;

ngOnInit() {
  this.options =
    this.myControl.valueChanges
      .pipe(
        startWith(''),
        map(value => this._filter(value))
      );
}

private _filter(value: string: string[] {
  ...
  return filteredArray;
}
```

Group

```
<mat-autocomplete
  #auto="matAutocomplete">
  <mat-optgroup
    ngFor="let group of groups | async"
    [label]="group.name">
    <mat-option
      ngFor="let option of group.options"
      [value]="option">
      {{option.name}}
    </mat-option>
  </mat-optgroup>
</mat-autocomplete>
```
