

### Query

A query is a method called from the frontend that will retrieve some results from the backend.

A query will never update the data. Have a look at mutation for that.

### Mutation

A mutation is like a query except that it is used for update and save mechanisms. Other particularity: It is interpreted in queue not in parallel like query.

### Type extend

```
type Cat extends Animal {  
  name: String  
  meows: Boolean  
  purrs: Boolean  
  scratches: Boolean  
}
```
