

JQuery - common snippets

Get 1st DOM element:

```
$('#div').get(0)
```

Create new DOM element:

```
$('#<div>').appendTo($foo)
```

More info:

<http://api.jquery.com/>

JQuery

<code>.attr(name[,value])</code>	attribute (e.g. src)
<code>.html([value])</code>	element html content
<code>.text([value])</code>	element text (escapes html chars)
<code>.val([value])</code>	<input>'s value

all of these either get or set the corresponding property based on whether or not the *value* parameter is provided or not
