

### Calling steps from each other

```
[Given(@"I login as '{.*}")]
public void GivenLoginAs(string userName)
{
    Given(string.Format("I login as '{0}'", userName));
}
```

The Steps implementation class should derive from Steps class.

### Restricting scope binding

```
[Scope(Feature = "Feature1", Scenario =
"Scenario2")]
[Scope(Tag = "tag")]
[Given(@"I login as '{.*}")]
public void GivenSignInAs(string userName){}
```

Within attribute - AND, when several Scope attributes - OR.
