

Part1

```
# -- coding: utf-8 --
""" Example Google style docstrings.

This module demonstrates documentation as specified by the `Google Python
Style Guide`_. Docstrings may extend over multiple lines. Sections are created
with a section header and a colon followed by a block of indented text.

Example:

    Examples can be given using either the Example or Examples`
    sections. Sections support any reStructuredText formatting, including
    literal blocks::

        $ python example.py

Section breaks are created by resuming unindented text. Section breaks
are also implicitly created anytime a new section starts.

Attributes:

    module _level_variable1 (int): Module level variables may be documented in
    either the Attributes` section of the module docstring, or in an
    inline docstring immediately following the variable.

    Either form is acceptable, but the two should not be mixed. Choose
    one convention to document module level variables and be consistent
    with it.

Todo:

    * For module TODOs
    * You have to also use the sphinx.ext.todo` extension

.. _Google Python Style Guide:
    http://google.github.io/styleguide/pyguide.html
