Aggregate Functions in Summarise

`mean(x)` - Gives mean value

`max(x)` - Gives maximum value

`median(x)` - Gives median value

`min(x)` - Gives Minimum value

`sd(x)` - Gives Standard Deviation

`var(x)` - Gives Variance

`IQR(x)` - Inter Quartile range

`diff(r ange(x)`- Gives the range

Aggregate Functions in dplyr

dplyr provides several helpful aggregate functions of its own.

`first(x)` - Returns First element

`last(x)` - Returns Last element

`nth(x,n)` - Returns nth element

`n()` - Returns number of rows

`n_dist inct(x)`- Returns the count of unique values in the vector
