Python Cheat Sheet

by shribee (shribee) via cheatography.com/79125/cs/26282/

List

A = [1,2,3] B = A[:]	create new list as copy

Environments

conda create --name <env name> python=<version>	create environment
conda activate <env name>	activate environment
conda deactivate	deactivate environment
conda install <pkg name>	install package
conda update conda	update conda
conda info	verify conda is installed, check version number
conda env list	list of environments
conda list	list all packages and versions installed in active environment
conda list --explicit > <text file>	save environment to a text file
conda env create --file <text file>	create environment from a text file
where python	location of python installs
python --version	python version

Change jupyter notebook start directory

jupyter notebook --generate-config

This writes a file to C:\Users\username\.jupyter\jupyter_notebook_config.py

Change this line

#c.NotebookApp.notebook_dir = ''

to this text

c.NotebookApp.notebook_dir = '/the/path/to/home/folder/'
