

### Crear el package.json

```
npm init --yes
```

```
"scripts": {  
  "start": "electron ."  
}
```

### Instalar electronjs desde npm

```
npm install --save-dev electron
```

### Modulos de electron

```
app  
autoUpdater  
BrowserView  
BrowserWindow  
contentTracing  
dialog  
globalShortcut  
Compras integradas  
ipcMain  
Menu  
MenuItem  
net  
netLog  
powerMonitor  
powerSaveBlocker  
protocol  
screen  
session  
systemPreferences  
TouchBar  
Tray  
webContents
```

### Remote

```
importa el modulo remote    const { remote } = require('-  
                             electron')
```

```
Obtiene la ventana actual    let winPrincipal = remote.ge-  
                             tCurrentWindow();
```

```
Devuelve WebContents        remote.getCurrentWebCont-  
                             ents();
```

Importa el modulo remote en el archivo render.js para poder usar todos los metodos del proceso principal en el proceso render.
