DIR [path] [/A:attrib] [/O:sort] [opt]

path	display specific folder (c:\...)
/A	:H(iden) :D(folder) :A(ll)...
/O	:N :S :E(xt) :D(ate)
options	/S(all sub fold)/B(que le nom)

DIR abcd* /s /b

search for filename starting with abcd in current and all subs & display path only

DIR *abcd* /s /b

search for filenames containing abcd in current and all subs & display path only

DIR *.bat	search for *.bat files

ATTRIB [+attr | -attr] [path]\file [opt]

DIR-like qui display les fichiers + leurs attrib.

ATTRIB	*display [Attribs] [path of file]*
[+X	-X]	*set attrib:* R(eadOnly),H(idden)
/S	*set matching file in current and all sub fol*
/D	*process folder as well*

TYPE [PATH]\random.txt (MORE)

Display text file	.txt .py .c ...
MORE is TYPE in better	

MD nomfichier (MKDIR)

Crée un nouveau fichier

MD do re mi	crée ces 3 fichier dans le CD
MD [path]\re	crée le fichier re dans [path]
MD \do\re\mi	crée l'arbo ..\do\re\mi

RD nomfichier (RMDIR)

Delete folder

RD \do\re\mi	del mi in ..\do\re\mi
RD /S \do	after asking, del folders tree

COPY (files not folders)

COPY = Copy & past

COPY src.doc newfile.doc

Copy a file in the current folde

COPY src.txt c:\somwhere\else\new.txt

Copy from location to smhr else

COPY c:\temp\src.txt c:\doc\new.txt

Copy from some folder to another folder

COPY c:\mywork*.doc

Copy all the *.doc into current directory

COPY d:\work\oldfile.wp

Copy to current, keep smpe fname

COPY "c:\bull shit\calu ca va.txt"

If spaces in names use quotes " "

DEL [path]\file

Delete one or more files

DEL [path]\do.txt	*del do.txt in [path]*

DEL [path]\do.txt [path]\re.txt [path]\mi.txt
del do.txt, re.txt and mi.txt (can be != loc)

DEL /S c:\test	*del all files in ..\test*

MOVE (folders or file)

MOVE = cut & past

MOVE oldfile.wp newfile.doc

In the current folde

MOVE c:\temp\old.wp c:\work\new.doc

from specific place to antoher

MOVE (folders or file) (cont)

MOVE c:\temp\oldfile.wp

move the file to current (keep same fname)

create/manip text files (txt,py,c...)

type NUL>new.txt	*make empty new txt file*
echo bla>new.txt	*make new.txt with bla*
echo bla>>old.txt	*add "bla" to old.txt*

SET

Display, set or remove CMD env var. Changes made with SET will remain only for the duration of the current CMD session.

c:\>**SET** var=poke
c:\>echo %var%
poke

c:\>**SET** var=c:\test
c:\>echo %var%
c:\test
c:\>cd %var%
c:\test>_

/A=opérations

SET /A nb=**3**
SET /A nb=%nb%+**1**
echo %nb% ➞ **4**

/P=prompt user

SET /P var=[prompt string]

divers:

SET var=one two	OK

Redirection

cmd > filename	redirect cmd output>file
dir>new.txt	
cmd >> filename	append into a file
cmd < filename	
sort<rand.txt	sort file & print result
cmdA & cmdB	run cmdA then cmdB

cmdA && cmdB
run cmdA, if it suceeds then run cndB

cmdA || cmdB
run cmdA, if it fails then run cmdB

cmdA && cmdB || cmdC
If cmdA succeeds run cmdB, if it fails cmdC

Arguments/Parametres (batch)

Utile pour les scriptes avec paramètres

c:\>printVar.bat **viande rouge**

viande rouge

c:\>_

le fichier batch contient:

set arg1=**%1**

set arg2=**%2**

echo %arg1% %arg2%

%0-9

Comparaisons

NEQ (!=)	**EQU** (==)
LSS (<)	**LEQ** (<=)
GTR (>)	**GEQ** (>=)

Divers

REM comment...	comment
date /t	display date
time /t	display time
cls	clear screen
@echo off (batch)	turn off print of each line

set /A n=%random% %%100 +1

n=random n [1;100]

FINDSTR

FINDSTR "Joe" Contacts.txt

recherche la str **Joe** dans *Contacts.txt*

FINDSTR /C:"Joe Poulet" Contacts.txt

"/C:" n'est pas une adresse c'est une option (inclue l'espace dans la recherche de str)

FINDSTR /S /I "work" *.*

search in every file and filename in current and subs for the word **work**

OPTIONS: /S (search in subs) **/I** (ignore case) **/A**:2f (filenames in colour (2f is the colour))

Precurseurs

setlocal EnableDelayedExpansion

set i=2

echo %elem{%i%}%

Doesn't give the desired result because it means: show the value of the elem [variable, followed by i, followed by the value of the] variable. To solve this problem you must use Delayed Expansion: Enclose index variables in percent symbols, and enclose the array elements in exclamation marks:

set elem[1]=First element

set elem[2]=Second one

set elem[3]=The third one

set i=2

echo !elem[%i%]!

setlocal EnableExtensions

ex1 creevar.bat [nomvar] [valvar]

```
@echo off
