Add missing values

```
ADD VALUE LABELS BASIS_Nation_2
000 'deutsch'
120 'jugos law isch'
121 'alban isch'
EXECUTE.
```

command: ADD VALUE LABELS
make sure your first value is in line with the command. Start the variable with the value and then its name, framed with single quotes

Minimal Overview Bivariate Association Analyses

2 Categorical variables	Crosstabes	Stacked bar chart in %	Chi² independence test
1 Metric & 1 Categorical variable	Means	Bar chart means by category	Independent samples -test (2 categories), One-way ANOVE (3+ categories)

If you properly understand these tests, you'll start to see that most statistical tests are variations on these big 5 tests. For example, multiple regression is simple regression with more than 1 predictor; logistic regression is just regression with a dichotomous outcome variable; the Kruskal-Wallis test is basically a one-way ANOVA on ranked scores. And so on...
