

### Add missing values

```
ADD VALUE LABELS BASIS_Nation_2 000 'deutsch'  
120 'jugoslawisch'  
121 'albanisch'  
EXECUTE.
```

command: ADD VALUE LABELS

make sure your first value is in line with the command. Start the variable with the value and then its name, framed with single quotes

### Minimal Overview Bivariate Association Analyses

2 Categorical variables	Crosstabes	Stacked bar chart in %	Chi <sup>2</sup> independence test
1 Metric & 1 Categorical variable	Means	Bar chart means by category	Independent samples -test (2 categories), One-way ANOVA (3+ categories)

If you properly understand these tests, you'll start to see that most statistical tests are variations on these big 5 tests. For example, multiple regression is simple regression with more than 1 predictor; logistic regression is just regression with a dichotomous outcome variable; the Kruskal-Wallis test is basically a one-way ANOVA on ranked scores. And so on...
