

Brocade Vyatta Documentation		Firewall																																																																																													
Official Documentation is located at: <a href="http://www.brocade.com/content/html/en/administration-guide/vyatta_5400_manual/wwhelp/wwhelpimpl/js/html/wwhelp.htm">http://www.brocade.com/content/html/en/administration-guide/vyatta_5400_manual/wwhelp/wwhelpimpl/js/html/wwhelp.htm</a>		show firewall	Display firewall rule configurations																																																																																												
		show firewall [name <b>name</b> ] [rule <b>rule-num</b>   statistics]]	Display information for specific firewall rule set and/or specific rule																																																																																												
		clear firewall {name <b>name</b> } [rule <b>rule-num</b> ] counters	Clear firewall rule counters																																																																																												
System Information		NAT																																																																																													
show system storage	Current Disk utilization	show nat [destination   source] rules	Show configured NAT rules																																																																																												
show system memory	Current memory utilization	show nat [destination   source] statistics	Show statistics for configured NAT rules																																																																																												
monitor log	Display log in realtime	show nat [destination   source] translations	Show active NAT translations																																																																																												
show log tail <NUMBER>	Display last NUMBER is lines	'destination' or 'source' must be specified in the command																																																																																													
show version	Display current software version	VPN - IPSec Point to Point																																																																																													
ls -lh /var/log	List log file on disk			show vpn ike sa [peer <b>peer</b> ]	Display Phase 1 SAs			show vpn ipsec sa [peer <b>peer</b> [tunnel <b>tunnel</b> ]]	Display Phase 2 SAs and Tunnels			show vpn ipsec sa detail [peer <b>peer</b> [tunnel <b>tunnel</b> ]]	Display Detailed Phase 2 SAs and Tunnels			show vpn ipsec sa statistics [peer <b>peer</b> [tunnel <b>tunnel</b> ]]	Display Phase 2 statistics for peers and Tunnels			reset vpn ipsec-peer <b>peer</b> [tunnel <b>tunnel</b> ]	Reset a specific Peer and/or Tunnel	Configuration - Display		Routing		show configuration	Display configuration	show ip route	Device IP Routing Table	show configuration commands	Display configuration in command format	show ospf4 neighbor	OSPF neighbors	show system commit	Display list of recent commit	show ospf4 database	OSPF Database	show system commit diff rev-num	Display changes applied in specific commit	Failover		Configuration - Edit		configure	Enter Configuration Mode	show vrrp	Display current VRRP failover status	commit	Apply Changes to running configuration	show config-sync status	Display configuration synchronization status	save	Save Applied changes to Startup configuration	show config-sync difference	Display configuration differences between peers	discard	Discard unapplied changes and Exit Configuration mode	These are useful commands if there are two Vyatta's configured for failover		show	Show configuration with changes configuration			set <i>arguments</i>	Add new item to configuration			delete <i>arguments</i>	Remove item to configuration			Interfaces				show interfaces	Interface IP information			show interface ethernet detail	Detailed interface counters			monitor interfaces	Interface usage			show arp	Device ARP table			clear interfaces counters	Clear interface counters		
		show vpn ike sa [peer <b>peer</b> ]	Display Phase 1 SAs																																																																																												
		show vpn ipsec sa [peer <b>peer</b> [tunnel <b>tunnel</b> ]]	Display Phase 2 SAs and Tunnels																																																																																												
		show vpn ipsec sa detail [peer <b>peer</b> [tunnel <b>tunnel</b> ]]	Display Detailed Phase 2 SAs and Tunnels																																																																																												
		show vpn ipsec sa statistics [peer <b>peer</b> [tunnel <b>tunnel</b> ]]	Display Phase 2 statistics for peers and Tunnels																																																																																												
		reset vpn ipsec-peer <b>peer</b> [tunnel <b>tunnel</b> ]	Reset a specific Peer and/or Tunnel																																																																																												
Configuration - Display		Routing																																																																																													
show configuration	Display configuration	show ip route	Device IP Routing Table																																																																																												
show configuration commands	Display configuration in command format	show ospf4 neighbor	OSPF neighbors																																																																																												
show system commit	Display list of recent commit	show ospf4 database	OSPF Database																																																																																												
show system commit diff rev-num	Display changes applied in specific commit	Failover																																																																																													
Configuration - Edit		configure	Enter Configuration Mode	show vrrp	Display current VRRP failover status	commit	Apply Changes to running configuration	show config-sync status	Display configuration synchronization status	save	Save Applied changes to Startup configuration	show config-sync difference	Display configuration differences between peers	discard	Discard unapplied changes and Exit Configuration mode	These are useful commands if there are two Vyatta's configured for failover		show	Show configuration with changes configuration			set <i>arguments</i>	Add new item to configuration			delete <i>arguments</i>	Remove item to configuration			Interfaces				show interfaces	Interface IP information			show interface ethernet detail	Detailed interface counters			monitor interfaces	Interface usage			show arp	Device ARP table			clear interfaces counters	Clear interface counters																																												
configure	Enter Configuration Mode	show vrrp	Display current VRRP failover status																																																																																												
commit	Apply Changes to running configuration	show config-sync status	Display configuration synchronization status																																																																																												
save	Save Applied changes to Startup configuration	show config-sync difference	Display configuration differences between peers																																																																																												
discard	Discard unapplied changes and Exit Configuration mode	These are useful commands if there are two Vyatta's configured for failover																																																																																													
show	Show configuration with changes configuration																																																																																														
set <i>arguments</i>	Add new item to configuration																																																																																														
delete <i>arguments</i>	Remove item to configuration																																																																																														
Interfaces																																																																																															
show interfaces	Interface IP information																																																																																														
show interface ethernet detail	Detailed interface counters																																																																																														
monitor interfaces	Interface usage																																																																																														
show arp	Device ARP table																																																																																														
clear interfaces counters	Clear interface counters
