

Useful Symbols		
\forall	for all (universal operator)	
\exists	exists (existential operator)	
\in	in the set	
\wedge	and	
\vee	or	
\sim	not	
\equiv	equivalent	
\subset	subset	
\supset	superset	
$\{\}$, \emptyset	empty set	
\leftrightarrow	biconditional (both are true)	

List of Equivalences (cont)		
inverse	$p \rightarrow q$ (cond)	$p \rightarrow p$ (inverse)
vacuously true = true by absence		
converse and inverse are the SAME		

Set-Builder Notation		
Elements/variables	Belongs to	Such that
$\{x \in D \mid P(x)\}$		
set	Domain(set)	Predicate

Functions		
Requirements:		
- Arrow coming out of every element in domain		
- Every element can only have one element of <i>domain</i> connected to one element of <i>codomain</i>		
unsatisfied requirement = relation		
y can be used repeatedly but x values only have one arrow coming out		

Tautologies and Contradictions		
Tautologies	Always true statements	t
Contradictions	Always false statements	c
$p \wedge \sim p \equiv c$	$T \wedge F \equiv c$	$F \wedge T \equiv F$
$p \vee \sim p \equiv t$	$p \wedge c \equiv c$	
Absorption law: variable absorbing operator		
\Rightarrow use truth table to prove law		
\Rightarrow other variables don't play a role in statement validity		
$p \vee (p \wedge q) \equiv p$; $p \wedge (p \vee q) \equiv p$		

Statements		
Universal	For all, for each	
Existential	At least, there exists	
Conditional	If \rightarrow then	
Universal Conditional	For all & if-then	
Universal Existential	For all & there exists	
Existential Universal	There exists & for all	

Set-Roster Notation		
$A = \{1, 2, 3 \dots 100\}$		
use ellipses for larger sets		

Subsets		
$B \subseteq A$	B =subset, A =superset	
Proper Subsets: elements that belong to superset but NOT subset		

Relations		
Relations=	subsets of cartesian product	
$R \subseteq A \times B$	Relation \subseteq Domain \times Codomain	
Domain	SET that includes every element from source	
don't always have to include ordered pairs		

Quantifiers and Quantified Statements		
Statement type	original	negated
Universal	$\forall x \in D, P(x)$	$\exists x \in D, \sim P(x)$
Existential		
Universal Conditional		

DeMorgan's Law		
• Tells us how to handle conjunction and disjunction negations		
$(p \wedge q) \equiv p \vee \sim q$		
$(p \vee q) \equiv p \wedge \sim q$		
"The connector is loose(l) or the machine is unplugged(u)"		
$I \vee u \rightarrow$ negation $\rightarrow (I \vee u) \equiv I$		
$\wedge \sim u$		
"The connector is not loose and the machine is not unplugged"		
$p \vee q$ is the opposite of $p \wedge q$		
When using DeMorgan's law, no need for truth table		

Truth Table for $p \rightarrow q$		
p	q	$p \rightarrow q$
T	T	T
T	F	F
F	T	T
F	F	T

Argument Truth Table					
premises				conclusion	
p	q	r	$\sim r$	$q \vee \sim r$	$p \wedge r$
T	T	T	F	T	T
T	T	F	T	F	F
T	F	T	F	T	T
T	F	F	T	F	F
F	T	T	F	T	T
F	T	F	T	F	F
F	F	T	F	T	F
F	F	F	T	F	F

Critical row = row where both premises are true	
premise and conclusion = TRUE is a valid argument	

Arguments		
$p \rightarrow q$	major premise	
p	minor premise	
$\therefore q$	therefore, conclusion	
premises aka assumptions or hypotheses		
verified using truth table

Argument Forms (VALID)

Modus Ponens $p \rightarrow q$

p

$\therefore q$

Modus Tollens $p \rightarrow q$

$\sim q$

$\therefore \sim p$

Generalization p

$\therefore p \vee q$

Specialization $p \wedge q$

$\therefore q$

Elimination $p \vee q$

$\sim q$

$\therefore p$

Transitivity $p \rightarrow q$

$q \rightarrow r$

$\therefore p \rightarrow r$

Proof by div. into cases $p \vee q$

$p \rightarrow r$

$q \rightarrow r$

$\therefore r$

Fallacy (INVALID ARGUMENTS)

Converse Error $p \rightarrow q$

q

$\Rightarrow \therefore p$

Inverse Error $q \rightarrow p$

$\sim p$

$\therefore \sim q$
