

Core Navigation

<code><C-f></code>	Forward (Page down)
<code><C-d></code>	Move down (Half a page)
<code><C-b></code>	Backward (Page up)
<code><C-u></code>	Move up (Half a page)
<code><C-o></code>	Jump back
<code><C-i></code>	Jump forward
<code>gg</code>	Go to first line
<code>Shift-G</code>	Go to last line
<code>:10, 10gg</code>	Jump to line# 10
<code>10j</code>	(Relative) Jump down 10 lines
<code>10k</code>	(Relative) Jump up 10 lines
<code>J</code>	Join lines

UI/UX

<code><leader>uC</code>	Colorscheme with preview
<code><leader>uD</code>	Enable code block dimming
<code><leader>ul</code>	Toggle line number
<code><leader>uL</code>	Toggle relative number
<code><leader>uw</code>	Toggle word wrap
<code><C-/></code>	Toggle Terminal window
<code>:Neotree</code>	Neotree file explorer

Buffer Management

<code><leader>fb</code>	List open buffers
<code><Shift>l/h</code>	Next/Prev buffer
<code><leader>bd</code>	Close current buffer
<code><C-w>v</code>	Split vertical
<code><C-w>s</code>	Split horizontal
<code><C-w>h/j/k/l</code>	Navigate splits

Text Objects

<code>viv</code>	Select inner word
<code>vi"</code>	Select inner quotes
<code>vi{</code>	Select inner curly braces
<code>vip</code>	Select inner paragraph
<code>va[</code>	Select around [] braces
<code>dap</code>	Delete around paragraph

Code Folding

<code>zR</code>	Open all folds
<code>zM</code>	Close all folds
<code>za</code>	Toggle fold
<code>zA</code>	Toggle all folds under cursor
<code>zc</code>	Close fold
<code>zo</code>	Open fold
<code>zO</code>	Open all folds under cursor

Marks & Bookmarks

<code>m[a-z]</code>	Set local mark
<code>'[a-z]</code>	Jump to mark
<code>:marks</code>	List all marks
<code>''</code>	Jump to last position
<code>`[a-z]</code>	Jump to exact position
<code>:delmarks a-z</code>	Del lowercase marks (a-z)
<code>:delmarks ax</code>	Del "a" and "x" marks
<code>:delmarks!</code>	Del marks (except A-Z,0-9)

Functions & Symbols

<code><leader>cs</code>	Document symbols
<code>gr</code>	Find all references
<code>gd</code>	Go to definition
<code>gD</code>	Go to declaration
<code>K</code>	Show docstring/type hints
<code>[[or]]</code>	Prev/Next object matches

Diagnostics

<code>]d</code>	Next diagnostic
<code>[d</code>	Prev diagnostic
<code><leader>sd</code>	Document diagnostics
<code><leader>sD</code>	Workspace diagnostics

Code Actions

<code><leader>cr</code>	Rename symbols
<code><leader>cf</code>	Format code
<code><leader>ca</code>	Code actions

Indentation

<code>></code>	Indent right
<code><</code>	Indent left
<code>gg=G</code>	Auto-indent entire file
<code>=</code>	Auto-indent as per language
<code>=ip</code>	Indent current paragraph

Search

<code><leader>sr</code>	Search and Replace
<code><leader>ff</code>	Search files (Project root)
<code><leader>sg</code>	Search text (Project root)
<code><leader>ss</code>	Symbol search
<code><leader>sc</code>	Command history
<code><leader>/</code>	Grep (Root dir)
<code><leader>sw</code>	Search word under cursor
<code><leader>sk</code>	Search all keymaps
<code><leader>st</code>	Search TODO WARNING

Git

<code><leader>gc</code>	Commit log texts search
<code><leader>gs</code>	Status (file search)
<code><leader>ge</code>	Git explorer (Neotree)
<code><leader>gf</code>	Current file history

LazyGit

<code><leader>gg</code>	Open LazyGit window
<code><C-r></code>	Switch to recent repo
<code><C-b></code>	Filter files by status
<code>p</code>	Git pull
<code>P</code>	Git push
<code><space></code>	Stage
<code>a</code>	Stage all
<code>c</code>	Commit
<code>s</code>	Stash
<code>z</code>	Undo
<code><C-z></code>	Redo
<code>i</code>	Add to .gitignore
<code>q</code>	Quit
