

Set symbols			
<b>Set</b>	$\{ \}$	a collection of elements	$A = \{3,7,9,14\}$ , $B = \{9,14,28\}$
<b>Such that</b>		such that	$A = \{x \mid x \in \mathbb{R}, x < 0\}$
<b>Intersection</b>	$A \cap B$	belongs to both A AND B at	$A \cap B = \{9,14\}$
<b>Union</b>	$A \cup B$	belongs to either A OR B	$A \cup B = \{3,7,9,14,28\}$
<b>Subset</b>	$A \subseteq B$	A is a subset of B. Set A is included in set B.	$\{9,14,28\} \subseteq \{9,14,28\}$
<b>Proper subset / strict subset</b>	$A \subset B$	A is a subset of B, but A is not equal to B	$\{9,14\} \subset \{9,14,28\}$
<b>Not a subset</b>	$A \not\subseteq B$	Set A is not a subset of set B	$\{9,66\} \not\subseteq \{9,14,28\}$
<b>Superset</b>	$A \supseteq B$	A is a superset of B. Set A includes set B	$\{9,14,28\} \supseteq \{9,14,28\}$
<b>Proper superset / strict superset</b>	$A \supset B$	A is a superset of B, but B is not equal to A	$\{9,14,28\} \supset \{9,14\}$
<b>Not superset</b>	$A \not\supseteq B$	Set A is not a superset of set B	$\{9,14,28\} \not\supseteq \{9,66\}$
<b>Power set</b>	$2^A$	All subsets of A	
<b>Power set</b>	$P(A)$	All subsets of A	

Set symbols (cont)			
<b>Equality</b>	$A=B$	Both sets have the same members	$A = \{3,9,14\}$ , $B = \{3,9,14\}$ , $A=B$
<b>Complement</b>	$A^c$	All the objects that do not belong to set A	
<b>Relative complement</b>	$A \setminus B$ or $A - B$	Objects that belong to A and not to B	$A = \{3,9,14\}$ , $B = \{1,2,3\}$ , $A \setminus B = \{9,14\}$
<b>Symmetric difference</b>	$A \Delta B$ or $A \oplus B$	Objects that belong to A or B but not to their intersection	$A = \{3,9,14\}$ , $B = \{1,2,3\}$ , $A \Delta B = \{1,2,9,14\}$
<b>Element of</b>	$a \in A$	Set membership	$A = \{3,9,14\}$ , $3 \in A$
<b>Not element of</b>	$x \notin A$	No set membership	$A = \{3,9,14\}$ , $1 \notin A$
<b>Ordered pair</b>	$(a,b)$	Collection of 2 elements	
<b>Cartesian product</b>	$A \times B$	Set of all ordered pairs from A and B	
<b>cardinality</b>	$ A $ or $\#A$	The number of elements of set A	$A = \{3,9,14\}$ , $ A =3$

Set operations	
<b>Associativity</b>	$(A \cup B) \cup C = A \cup (B \cup C)$ $(A \cap B) \cap C = A \cap (B \cap C)$
<b>Commutativity</b>	$A \cup B = B \cup A$ $A \cap B = B \cap A$
<b>Complementation</b>	$A \cup \text{Not}(A) = U$ $A \cap \text{Not}(A) = \emptyset$
<b>Idempotence</b>	$A \cup A = A$ et $A \cap A$
<b>Identité</b>	$A \cup \emptyset = A$ $A \cap U = A$

Set operations (cont)	
<b>Extrémité</b>	$A \cup U = U$ $A \cap \emptyset = \emptyset$
<b>Involution</b>	$\text{Not}(\text{Not}(A)) = A$
<b>Morgan's law</b>	$\text{Not}(A \cup B) = \text{Not}(A) \cap \text{Not}(B)$ $\text{Not}(A \cap B) = \text{Not}(A) \cup \text{Not}(B)$
<b>Distributivité</b>	$A \cup (B \cap C) = (A \cup B) \cap (A \cup C)$ $A \cap (B \cup C) = (A \cap B) \cup (A \cap C)$

Languages - Definitions	
<b>Formal language</b>	vocabulary + grammar rules
<b>Monoid</b>	Set having an internal binary operation $(+, -, *, U, \dots)$ and having a neutral element $\in$ . Ex: $\langle E, +, \in \rangle$ means all strings of E will be concatenated with operator +
<b>Grammar</b>	$(V_n, V_t, P, S)$ when: - $V_n$ is a finite non-empty set whose elements are variables - $V_t$ is a finite non-empty set of terminal states - $V_n \cap V_t = \emptyset$ - $P$ is a finite set whose elements are $\alpha \rightarrow \beta$ , known as production rules when $\alpha, \beta \in (V_n \cup V_t)^*$ but $\alpha$ should contain at least 1 symbol from $V_n$ - $S$ is a start symbol, where $S \in V_n$

<b>Symbol</b>	Element of a set. Ex for set $A = \{1, 2, 3\}$ , 2 is an element
<b>Alphabet</b>	A finite and non empty set of symbols

### Languages - Definitions (cont)

**Length of a string** Number of symbols in a string. Ex: for  $w = aabbc$ ,  $|w| = 5$

**Empty language**  $\emptyset$  contains no string

**Empty string**  $\epsilon$  where  $|\epsilon| = 0$

**$A^n$**  Word of length  $n$  from the alphabet  $A$

**$A^*$**  Words of finite length from the alphabet  $A$  or null (can be empty:  $\epsilon$ )

**$A^+$**  Words of finite length from the alphabet  $A$  and NOT NULL (no  $\epsilon$ )

**Regular expression** Recursive language, the rules of the expression must be independent. Ex:  
 $L1 = \{a^n b^m \mid n \geq 0, m \geq 0\}$  and  
 $L2 = \{a^n b^m \mid n = 2m\}$   
**Here  $L1$  is regular and  $L2$  is not**  
 Because in  $L2$  there is a dependency between  $n$  and  $m$

### Maths set reminders

**N**  $\{0, 1, 2, 3, \dots\}$

**Z**  $\{\dots, -3, -2, -1, 0, 1, 2, 3, \dots\}$

**D**  $\{d \mid d \text{ is a nb. having a finite number of decimals}\}$

**Q**  $\{r \mid r \text{ is a rational nb. that can be written as the quotient } a/b \text{ of a real integer number } a \text{ by a whole integer (not null) } b\}$

**IR**  $\{\dots, -3, -2, -1, 0, \sqrt{2}, 1, \sqrt{2}, 2, e, 3, \pi, \dots\}$

Successive inclusions  $N \subset Z \subset D \subset Q \subset IR$

### Automata definitions

**DFA** Deterministic Finite Automata. A DFA has a deterministic because from each state we are able to determine the next state.

**NDA** Non Deterministic Finite Automata. A NDA is non deterministic because we can't always determine which will be the next state from the present state.

### Operations on Languages

**Union**  $L \cup M = \{x \mid x \in L \text{ or } x \in M\}$

**Intersection**  $L \cap M = \{x \mid x \in L \text{ and } x \in M\}$

**Difference (exclusion)**  $L \setminus M = \{x \mid x \in L \text{ and } x \notin M\}$

**Complement on  $A^*$**   $\text{Comp}(L) = A \setminus L = \{x \mid x \in A \text{ and } x \notin L\}$

$L \cup \emptyset = L$

$L \cap \emptyset = \emptyset$

### Identity of Regular Expressions

$\emptyset + R = R$

$\emptyset \cdot R = R \cdot \emptyset = \emptyset$

$\Lambda \cdot R = R \cdot \Lambda = R$

$\Lambda^* = \Lambda$  and  $\emptyset^* = \Lambda$

$R + R = R$

$R^* R^* = R^*$

$R \cdot R^* = R^* \cdot R$

$(R^*)^* = R^*$

$\Lambda + R \cdot R^* = R^* = \Lambda + R^* \cdot R$

$(P \cdot Q)^* P = P \cdot (Q \cdot P)^*$

$(P + Q)^* = (P^* \cdot Q^*)^* = (P^* + Q^*)^*$

$(P + Q) \cdot R = P \cdot R + Q \cdot R$  and  $R \cdot (P + Q) = R \cdot P + R \cdot Q$

### Graph types

**Reflux** All states have a loop, meaning  $\delta(\text{state1}, \text{input}) = \text{state1}$

**Symmetric** All states have a direct way back, meaning:  
 $\delta(A, x) = B$  and  $\delta(B, y) = A$

### Graph types (cont)

**Antisymmetric** There never is a direct way back to the same state meaning, if:  
 $\delta(A, x) = B$  then  $\delta(B, y) \neq A$

**Transitive** There are shortcuts to a state, meaning if:

### Grammar construction

**Problem** - Suppose :

$L(G) = \{a^n b^m c^k \mid n \geq 0, k > 1, m = n+k\}$

We have to find out the grammar  $G$  which produces  $L(G)$ .

**Solution:**

Possible word  $w = a^4 b^9 c^5$

We need to decompose  $b^9$ :  $w = a^4 b^4 b^5 c^5$

Now we can define :

- **S1** having the same number of  $a$  followed by the same number of  $b$ .

- **S2** having the same number of  $b$  followed by the same number of  $a$

So:

$S = S1 S2$

$S1 = a S1 b \mid \Lambda$

$S2 = b S2 a \mid b b c c$

Why  $bbcc$  as alternative to  $S2$ ? Because in the case of a minimum word  $w = b^2 c^2 = bbcc$

because  $k > 1$  so in this case we do have  $m = n+k = 0+2$
