

Configure Mode

```
OSPF configuration (basic)  set protocols ospf parameters router-id
                             <loopback>
                             set protocols ospf area 0.0.0.0 network <network
                             address/prefix>
                             set protocols ospf redistribute connected
                             commit
```

```
Adding static configuration  set protocols static route <>/prefix next-hop
                             <address>
                             commit
                             show ip route
```

As usual, don't forget to save and backup your configurations

Operational commands

```
configure
shutdown
```
