

Options

| | |
|------------------------------------|---|
| -C | Compress the data if concealing, or uncompress it if extracting. |
| -Q | Quiet mode. If not set, the program reports statistics such as compression percentages and amount of available storage space used. |
| -S | Report on the approximate amount of space available for hidden message in the text file. Line length is taken into account, but other options are ignored. |
| -p <i>password</i> | If this is set, the data will be encrypted with this password during concealment, or decrypted during extraction. |
| -l <i>line-length</i> | When appending whitespace, snow will always produce lines shorter than this value. By default it is set to 80. |
| -f <i>message-file</i> | The contents of this file will be concealed in the input text file. |
| -m <i>message-string</i> | The contents of this string will be concealed in the input text file. Note that, unless a newline is somehow included in the string, a newline will not be printed when the message is extracted. |

Synopsis: **snow** [**-CQS**] [**-p** *passwd*] [**-l** *line-len*] [**-f** *file* | **-m** *message*] [*infile* [*outfile*]]

Examples

The following command will conceal the message "I am lying" in the file *infile*, with compression, and encrypted with the password "hello world". The resulting text will be stored in *outfile*.

```
snow -C -m "I am lying" -p "hello world"
```

To extract the message, the command would be

Note that the resulting message will not be terminated by a newline.

To prevent line wrap if text with concealed whitespace is likely to be indented by mail or news readers, a line length of 72 or less can be used.

```
snow -C -l 72 -m "I am lying" infile outfile
```

The `snow -S -l 72 infile` approximate storage capacity of a file can be determined with the `-S` option.

Note for Compression: SNOW provides rudimentary compression, using Huffman tables optimised for English text. However, if the data is not text, or if there is a lot of data, the use of the built-in compression is not recommended, since an external compression program such as `compress` or `gzip` will do a much better job.
